DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/30/06 has been entered.

Response to Arguments

2. Applicant's arguments filed 6/30/06 have been fully considered but they are not persuasive. Applicant argues Nakamura does not disclose an admixture of a hydroxydiphenyl ether and an aliphatic acid, but discloses hydroxydipenyl ether amongst a length list of possibilities of phenolic compounds and further states that the preferred polymer materials are crosslinked materials. However, albeit amongst a lengthy list of possibilities, the teaching of a hydroxydipenyl ether and an aliphatic acid carrier is present in Nakamura. Regarding the preferred teaching of a crosslinked material, disclosed examples and preferred embodiments do not constitute a teaching away from a broader disclosure or nonpreferred embodiments. In re Susi, 440 F.2d 442, 169 USPQ 423 (CCPA 1971). "A known or obvious composition does not become patentable simply because it has been described as somewhat inferior to some other

product for the same use." In re Gurley, 27 F.3d 551, 554, 31 USPQ2d 1130, 1132 (Fed. Cir. 1994)

As to the combination of references, the argument is moot in light of the new rejection.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

4. Claims 1, 3, 4, 7, 8, and 11 are rejected under 35 U.S.C. 102(a) as being anticipated by Nakamura WO 99/38541.

As to claims 1, 7, 8, and 11, Nakamura discloses an odor control absorbent article comprising:

- a) a base substrate material selected from the group consisting of nonwoven fabrics, woven fabrics, polymeric films, and the combinations thereof (page 22, lines 3-17);
 - b) an odor control compound;

Page 4

Art Unit: 3761

c) the odor control compound comprising an admixture of a hydroxydiphenyl ether and aliphatic acid (page 6, lines 29-32, page 8, lines 18-26) carrier;

- d) Nakamura discloses a substrate with the compound attached to the substrate, in which case the compound is present as a coating on at least a portion of the substrate to which it is attached (page 18, lines 1-18). The limitation the odor control present as a coating by applying the compound topically to the base substrate material is directed to a process of making the article. "Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985) (citations omitted). MPEP 2113.
- e) with the base substrate material formed into a component material for a disposable sanitary product, (page 1, line 15-17, page 6, lines 29-32; page 8, lines 18-26; page 14, lines 28-34; page 18, lines 1-18; page 20, lines 7-20, and Figure 1). Regarding the limitation of the aliphatic acid carrier acting to shift the pH of the hydroxydiphenyl ether environment, and the examiner's interpretation of the performance characteristics of the instant apparatus claims, when the structure recited in the reference is substantially identical to that of the claims of the instant invention, claimed properties or functions are presumed to be inherent (MPEP 2112-2112.01). A prima facie case of either anticipation or obviousness has been established when the

reference discloses all the limitations of a claim except a property or function and the examiner can not determine whether or not the reference inherently possesses properties which anticipate or render obvious the claimed invention but has basis for shifting the burden of proof as in *In re Fitzgerald*, 619 F.2d 67, 70 205 USPQ 594, 596 (CCPA 1980). In the present case, the reference has met the structural requirements of claim by providing a base substrate with an attached compound comprising an admixture of a hydroxydiphenyl ether and an aliphatic acid carrier.

As to claim 3, Nakamura discloses the hydroxydiphenyl ether is a trichlorodiphenyl ether (page 14, lines 28-34).

As to claim 4, Nakamura discloses the modified acidic carrier is an organic acid (page 6, lines 29-32, page 8, lines 18-26).

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

6. Claims 9 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakamura. Nakamura discloses the present invention substantially as claimed. However, Nakamura does not specifically disclose the odor control absorbent article is a training pant or a pull-on garment. However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the odor control absorbent article to include a training pant or pull-on garment as it is old and well known in the art that disposable hygiene products can include diapers, sanitary napkins, training pants, pull-on garments, and incontinence garments.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nakamura in view of Jahnke et al. USPN 5178786. Nakamura discloses the present invention substantially as claimed except. Nakamura discloses aliphatic acid. Jahnke shows that hexanedioic acid is an equivalent structure known in the art (col. 3, lines 10-12). Therefore, because these two materials were art-recognized equivalents, at the time the invention was made, one of ordinary skill in the art would have found it obvious to substitute hexanedioic acid for an aliphatic acid.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jacqueline F. Stephens whose telephone number is (571) 272-4937. The examiner can normally be reached on Monday-Friday 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tanya Zalukaeva can be reached on (571) 272-1115. The fax phone
